## 1. Acknowledgements

We would like to express our deep gratitude to Mr. Trinh Quang Hoa and everyone in the project team. Your enthusiastic support and dedication made the project meaningful and successful.

A heartfelt thank you to family, friends and loved ones for their unwavering support. Your encouragement is a great and important motivation to help us overcome this challenge.

Finally, we would like to sincerely thank everyone for taking the time and interest to read and evaluate our project. Your interest and evaluation are a great source of encouragement to help us improve more and more

## 2. Introduction

Discover the magic of Yash Gems & Jewelleries, where craftsmanship meets innovation. Founded by Mr. Robert D'costa in 2005, we specialize in crafting exquisite gold and diamond jewelry using the latest technologies. As a trusted supplier to elite retailers, our intimate market knowledge ensures we deliver impeccable quality and design. Our talented team of designers and craftsmen bring dedication and artistry to every piece, offering top-quality jewelry at the best possible prices. Experience the elegance and brilliance that have made Yash Gems & Jewelleries a benchmark in the Indian jewelry industry.

## 3. Problem Definition

### 3.1. Problem Abstraction

The primary challenge faced by Yash Gems & Jewellery (P) Ltd is to transition from a traditional, physical retail environment to a comprehensive, user-friendly online platform. This platform should seamlessly facilitate the manufacturing and trading of gold and diamond jewelry, leveraging advanced technologies to enhance user experience and operational efficiency.

Key problems include:

1. **User Interaction:** Ensuring a smooth and intuitive user interface that allows customers to easily search, filter, and purchase jewelry.
2. **Search Functionality:** Developing an advanced search engine capable of handling complex search criteria to provide relevant and exhaustive search results.
3. **Shopping Cart and Payment Security:** Implementing a secure shopping cart feature that allows for easy addition and removal of products, coupled with a secure and confidential transaction process.
4. **Vendor Operations:** Enabling vendors to manage their product listings, update inventory, handle orders, and maintain detailed customer records with ease.
5. **Customer Management:** Facilitating user account creation and management, ensuring that customers can securely log in, view, and manage their purchases.

6. **Database Integration:** Maintaining a robust database to store and retrieve customer details, product listings, order details, billing information, and transaction records efficiently.
7. **Educational Content:** Providing informative content about diamonds, gems, and certifications to educate customers and enhance their buying experience.
8. **Marketing and Promotions:** Designing an attractive home page that highlights discounts, gift offers, festive offers, and new launches to engage and attract customers.

### 3.2. The Current System

Yash Gems & Jewelleries (P) Ltd currently operates in a traditional brick-and-mortar retail environment, where the business model is centered around physical interactions and transactions. The existing system has the following characteristics:

1. **Manual Operations:** The business relies heavily on manual processes for managing inventory, processing orders, and handling customer interactions. This includes physical record-keeping and direct communication with customers.
2. **Limited Reach:** The current system limits Yash's market reach to local and walk-in customers, restricting the potential for national and international sales.
3. **In-Person Sales:** Customers must visit the physical store to view and purchase jewelry, which can be time-consuming and inconvenient, especially for those who are not in close proximity to the store.
4. **Customer Service:** Customer service and support are provided face-to-face or via phone, which may not be as efficient or responsive as modern digital communication methods.
5. **Inventory Management:** Inventory updates and product information are managed manually, leading to potential delays in updating available stock and product details.
6. **Marketing and Promotions:** Marketing efforts are primarily traditional, relying on local advertisements, word-of-mouth, and in-store promotions. This limits the ability to reach a broader audience and leverage digital marketing strategies.
7. **Security:** Transactions and sensitive customer information are handled in-person, which may not provide the same level of security and confidentiality as a well-designed online system.
8. **Educational Content:** Information about diamonds, gems, and certifications is provided through in-store consultations, which may not be as comprehensive or accessible as digital content.

### 3.3. The Proposed System

Based on the problems that exist in the YGJ website, we propose a number of solutions to enhance and optimize the current system:

#### Optimized user interface:

- Redesign the website with a more user-friendly and intuitive interface.

- Improve user experience during the ordering process, ensuring smooth order selection and completion.

**Expanded functionality:**

- Each product detail should have more information, including attractive collections and images.

**Efficient payment process:**

- Simplify the payment process to reduce the risk of losing customers.
- Supports many payment methods and ensures high security standards during the transaction process.

**Advanced order management system:**

- Integrate real-time notifications and updates on order status.
- Improve delivery confirmation and tracking processes to ensure accuracy and timely response to customer needs.

These solutions aim to improve user experience, expand functionality and enhance management processes so that YGJ can better meet customers' wants and expectations.

**3.4. Boundaries of the System****Data type:**

- Jewelry products: YGJ website manages product information including images, descriptions, prices and customer reviews of this product
- Customers: Includes customer personal data such as name, age, address, phone number, customer email.
- Order: Order information includes selected products, recipient name, phone number, address, order status (ordered, in progress, paid, completed, canceled ...), payment method, delivery method.

**Customer Information Management:**

- Permissions: Users can create accounts to store personal information and track their order history.
- Account security: The system protects customer account information using encryption and other security measures.

**3.5. Development Environment**

- Programming language:

  - Front-end: Html, Css, Javascript & Reactjs

  - Back-end: C#, ASP .Net

- Database: SQL server

- Framework: Bootstrap, jQuery, MVC

- Development environment:

  - With Backend : Visual studio

  - With Front-end : Visual studio code

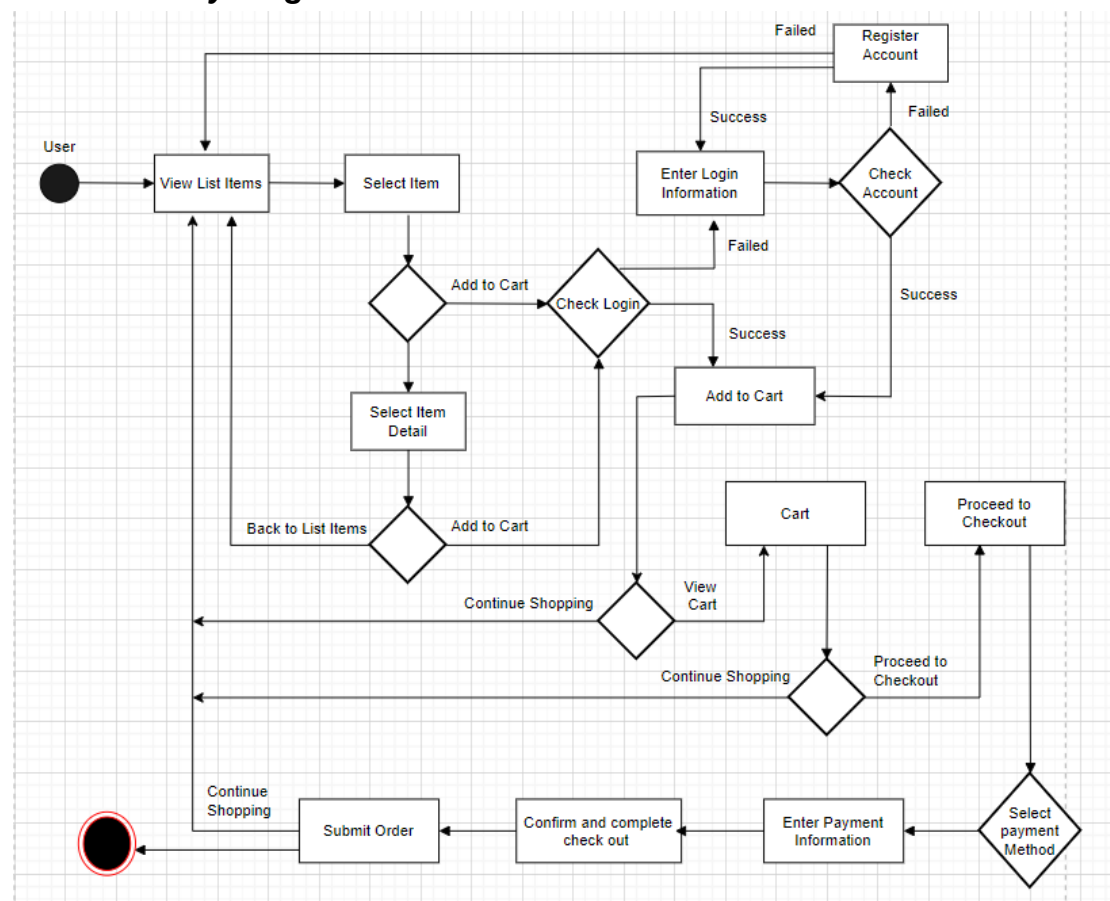

## 4. Requirements and Business Flows

### 4.1. Customer Requirements

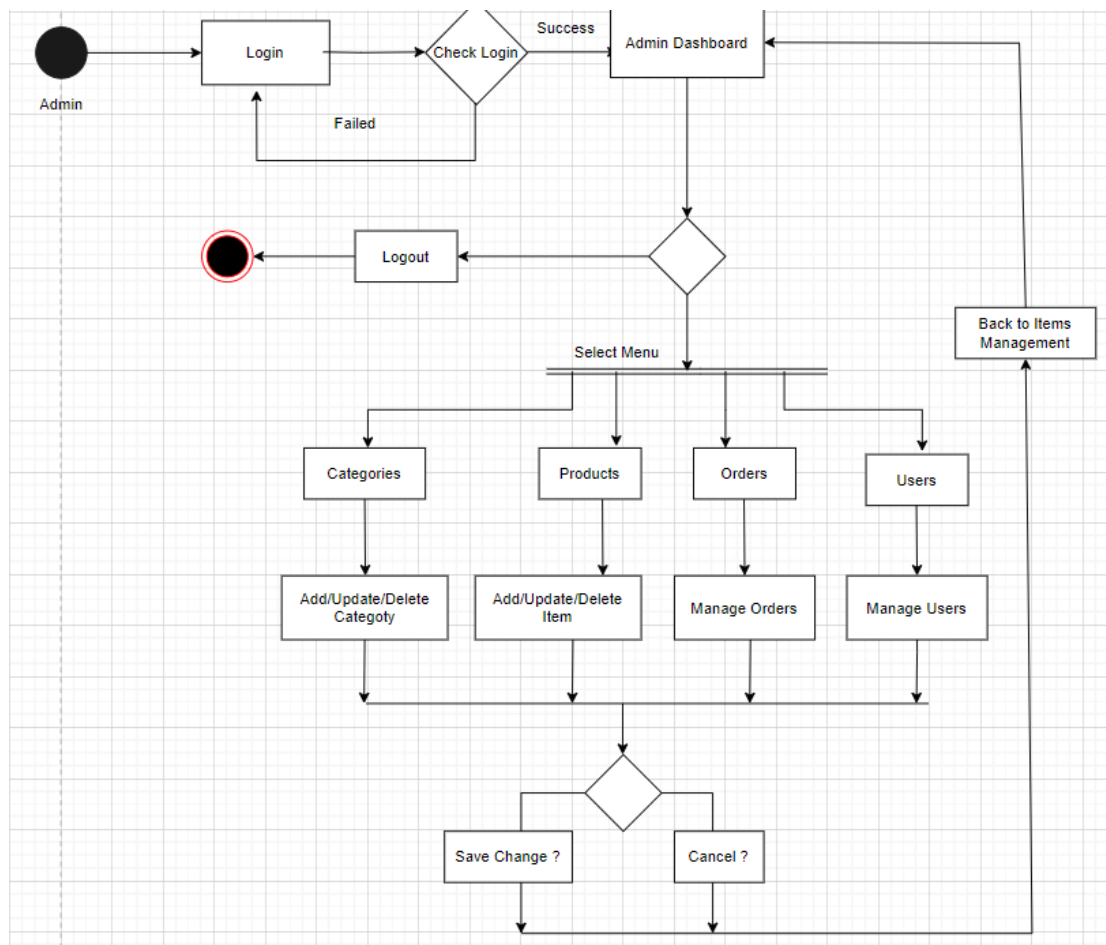

The customer wants a jewelry website that has all the basic functions of an online shopping site. The website must describe the product in detail and have clear images so that customers have a realistic view of the product. Regarding the search function, it is necessary to support customers in flexible searches, allowing filtering by price or product classification.

In addition, the website needs to have a simple, user-friendly interface to facilitate ordering, provide many flexible payment methods, and have an order tracking function. Furthermore, the website must include customer engagement features such as reviews and comments sections, customer support capabilities, and updates on promotions and discounts.

### 4.2. Activity Diagram

*User activity diagram*

*Admin activity diagram*

### 4.3. Use Case Diagram

## 5. Design

### 5.1. System Architecture

#### Front-end:

- Web Browser Interface: Provides a user interface for customers to interact with the website.
- HTML, CSS, JavaScript & Reactjs: Use web programming languages to display and interact with website content.

#### Back-end:

- Web Server: Ensures website service and handles user requests.
- Application Server (ASP.NET): Handles business logic, manages order status, and interacts with the database.
- Database Server (SQL server): Stores data related to products, customers, orders, and other information.

## Databases:

- Product: Stores detailed information about the product, including images, prices, descriptions.
- Customers: Preserving customers' personal information.
- Orders: Record information about orders, status and payment details.

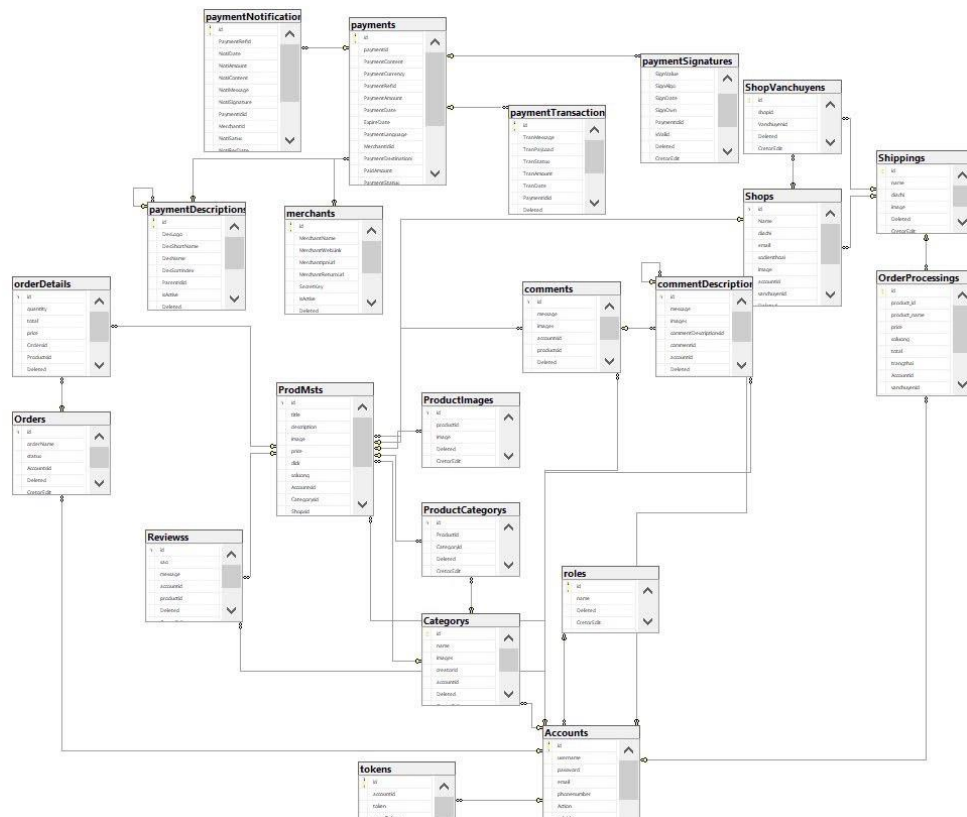

### Order and order management:

- Payment: Implement payment information storage and payment integration
- Delivery: Store delivery information
- Send notifications and updates to customers about orders, offers, and other events.

### Security Layer:

**User Authentication:** Authenticate users and manage access rights.

## 5.2. Database Design

## 6. System Prototype

### 6. Management and Project Planning

#### 6.1. *Management Approach*

**Member:**

- Phạm Trọng Quân (Leader)
- Hạ Quang Sơn
- Bùi Hải Giáp
- Nguyễn Huy Anh Duy
- Phùng Hoàng

**Project Management:**

- Utilize the Agile methodology for project management to enhance flexibility and adaptability to changes.
- Implement the Scrum framework to break down the project into short sprints with specific goals.

**Team Organization:**

- Foster a positive and collaborative work environment by encouraging open communication and sharing of ideas.
- Adopt a self-managed team model to stimulate innovation and contributions from all team members.

**Task Assignment:**

- Use Excel for task tracking and assignment.
- Select suitable individuals for tasks based on skills and preferences.

**Progress Monitoring:**

- Conduct short sprint meetings to assess progress and ensure everyone is working in the right direction.
- Always monitor tasks to keep everyone updated on their work and identify risks promptly.

**Meeting Frequency:**

- Organize weekly meetings to review progress, address issues, and set priorities for the upcoming week.
- Conduct sprint reviews after each sprint cycle to evaluate success and adjust plans if necessary.

**Meeting Content:**

- Review and discuss completed tasks, tasks in progress, and emerging issues.
- Identify and prioritize tasks to be undertaken in the next sprint cycle.

## 6.2. **Project Plan**

**Project name:** Yash Gem & Jewelry website

**Time:** 21/06/2024 – 29/07/2024

### **Determine Requirements:**

Start Date: 21/06/2024

End Date: 22/06/2024

Person Responsible:

Phạm Trọng Quân (Leader)

Hạ Quang Sơn

Bùi Hải Giáp

### **Requirements Analysis and Design diagram,database:**

Start Date: 23/06/2024

End Date: 28/06/2024

Person Responsible:

Hạ Quang Sơn

Bùi Hải Giáp

Nguyễn Huy Anh Duy

Task:

Collect requirements from customers.

Analyze the market and competitors.

User interface, activity diagram, Database and user experience design.

### **Website Development :**

Start Date: 28/06/2024

End Date: 17/07/2024

Responsible Person:

Hạ Quang Sơn

Phạm Trọng Quân

Bùi Hải Giáp

Phùng Hoàng

Job:

Back-end with ASP.NET : develop an optimized database, then handle server-side logic and build APIs, integrating security measures such as encryption, authentication,... to optimize performance

Front-end with Reactjs : Communicate with Backend, User Interface (UI) Design and User Experience (UX) Optimization while developing interactive features, optimizing performance and compatibility with different browsers

### **Testing and Fixing:**

Start Date: 17/07/2024

End Date: 21/07/2024

Responsible Person:

Phạm Trọng Quân

Phùng Hoàng

Nguyễn Huy Anh Duy

Job:

Conduct functional and performance testing on the backend side

Fix errors and optimize the website, improve user experience

**Prepare resources and reporting:**

Start Date: 22/07/2024

End Date: 29/07/2024

Person Responsible:

Phùng Hoàng

Nguyễn Huy Anh Duy

Job:

Track progress and resources will be submitted and then given to the leader for final inspection

Project report and faculty input

Final editing, packaging and project submission

### 6.3. Task Sheet

Time: 23/06/2024 - 28/06/2024 : Requirements Analysis and Design diagram					
No	Task Name	Deadline	Implementer	Status	Issue
1	Collect Requirements from Customers	23/06/2024 - 28/06/2024	Sơn	Done	No issue
2	Database Design		Sơn	Done	No issue
3	User Interface Design		Giáp	Done	No issue
4	User Experience Design		Giáp	Done	No issue
5	Activity Diagram Design		Duy	Done	No issue
	Summary of Sprint 1				
	Goal: Complete requirements analysis and design for UI, activity diagram, database, and user experience.				
	Result: All tasks are completed as planned, ensuring a solid foundation for the next stages of development.				

### *Sprint backlog*

### About our lab-grown diamonds

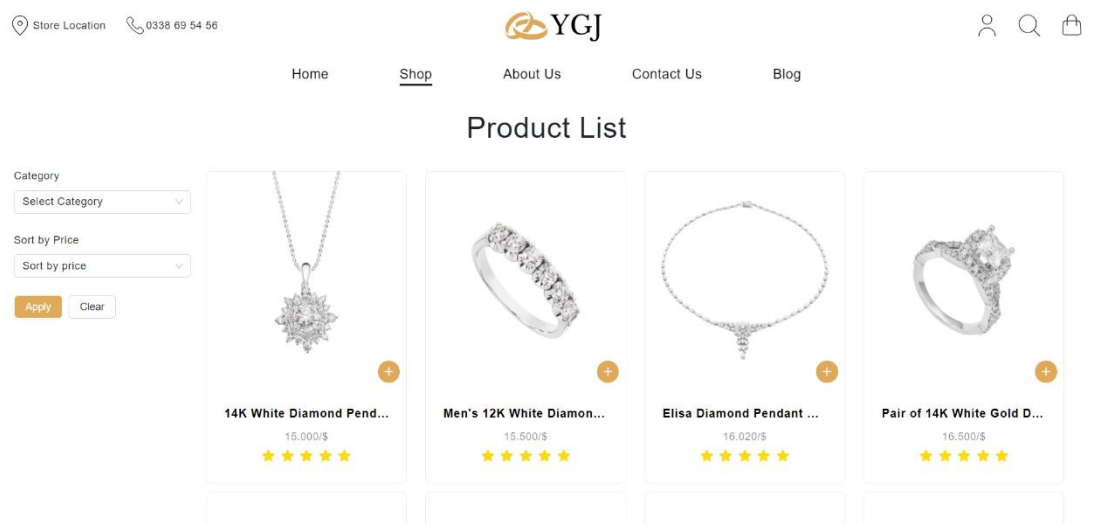

Our pioneering Lightbox Lab in Portland, Oregon, can grow a 1 carat stone in about two weeks, entirely from 100% renewable wind power.

What's more, our state-of-the-art technology can alter the chemistry of the growing process to create lab-grown diamonds not just in white, but also in blue and pink.
